

2025/2026 Xero rebuild — runbook

Companion to [invoice-ninja-to-xero-design](#). That doc says why; this one says what to do, in order. Written 2026-07-29.

Confirmed with Josh: no 2025 return has been filed, so this is a correction rather than a restatement — no amended-filing problem. Existing bank lines get **re-coded**, not deleted.

Account codes (confirmed 2026-07-29):

Purpose	Account
Invoice income	4300 — Service
Processor fees	6050 — Merchant Account Fees
Rounding differences	7050 — Miscellaneous
Payments settle into	Stripe Clearing — by GUID, not code (step 2)

Step 1 — Config

In [config.yaml](#):

```
xero:
  sales_account_code: "4300"
  rounding_account_code: "7050"
  clearing_account_id: ""      # filled in at step 2
```

Step 2 — Create the clearing account, and get its GUID

Accounting → Chart of accounts → **Add Bank Account** → name it [Stripe Clearing](#), set up manually, no feed.

Xero does not give bank accounts a Code. The chart of accounts has no field for one, so there is nothing to copy out of the UI. Get the GUID instead:

```
in2xero accounts
```

Paste it into [xero.clearing_account_id](#).

This account is what makes the whole thing work. The Xero bank feed already carries the Stripe and Venmo deposits for money Invoice Ninja also has payments for. Both posting to the real bank account would double the cash.

Step 3 — Rehearse on the Demo Company

Xero settings → Demo Company. Point `tenant_id` at it and run the full backfill.

An AUTHORISED invoice can **never be deleted** in Xero, only voided. The Demo Company can be reset; the real org cannot. Do not skip this.

Step 4 — Dry run against the real data

```
in2xero preflight
in2xero backfill --dry-run
```

`--dry-run` needs no Xero credentials. It builds and reconciles all 319 invoices and reports anything that will not post. Expect a handful of refusals; read them before going further.

Step 5 — Backfill

```
in2xero backfill
```

~16 API calls batched at 50. Starter's 1,000/day is ample. If it stops on the rate limit it stops cleanly — re-run and the crosswalk resumes.

After this Xero holds:

- \$117,374 of 2025 revenue across 211 invoices, real customer names, in **4300 Service**
- \$73,140 of 2026 revenue across 108 invoices
- payments settled into Stripe Clearing
- AR of \$395 across 5 open invoices

And, temporarily, **double-counted income** — the old bank lines are still coded to 4300 as well. Step 6 fixes that.

Step 6 — Re-code the 2025 bank lines

Accounting → Bank accounts → the fed account → Account transactions. For 2025, the rows currently coded to **4300 Service** (contacts read *Stripe*, *Venmo*, *Dan Wilson*, *Elk Country RV Resort*, *Amazon Shopping*) get re-coded to **Stripe Clearing**.

They stay reconciled against the bank. Only the account they point at changes. Cash keeps tying to the bank statement; the income double-count disappears.

\$25,997 of the \$27,720 is the single "Stripe" lump, so this is a much smaller job than the row count suggests.

While in there: *Amazon Shopping* \$177.98 sitting in revenue is almost certainly a refund miscoded to income. Worth a look.

Step 7 — Clear the clearing account

Whatever remains in Stripe Clearing after step 6 is **Stripe's processing fees**. Journal it to **6050 Merchant Account Fees**.

Sanity check: Xero currently shows **\$0.33** across its fee accounts for all of 2025, against ~\$26K of Stripe volume. The real figure is likely a few hundred to low thousands. If the clearing residual comes out near zero, something in steps 5–6 went wrong.

(There is also a separate **Stripe Fees** account carrying that \$0.33. Worth deciding whether to consolidate it into 6050 while you are in there.)

Step 8 — Verify

- P&L 2025 income ≈ **\$117,374**; 2026 YTD ≈ **\$73,140**
- Balance sheet AR ≈ **\$395**
- Stripe Clearing ≈ **\$0**
- Bank account still reconciles to the statement
- **6050 Merchant Account Fees** is now a plausible number

Step 9 — The 2026 bank feed

Separate from everything above and **more urgent for D&B than any of it**: Xero recorded zero transactions in 2026. The feed stopped in January. Cash currently shows \$9,984.83, which is a stale end-of-2025 carry-forward.

Imported payments move cash, but that is not the same as the feed being current and reconciled. A balance sheet whose cash doesn't tie to the bank statement is exactly what a credit reviewer checks first.

Find out what broke, restart it, catch up seven months.

Step 10 — Ongoing

```
in2xero sync      # cron it, daily
```

Loose ends worth a look

- **2 draft invoices worth \$10,637** sitting unsent in Invoice Ninja. Excluded from the import (drafts create no journals) but that is real money not billed.
- **1,080 Invoice Ninja clients**, ~60 with any billing. Only those 60 become Xero contacts. The other 1,020 are worth an archive pass in Invoice Ninja someday.
